

## Acknowledgments

that, Andrei Basov, Engineering Manager, Middleware and Core Services; Akshaye Dhawan, Engineering Manager, Training, Documentation, and Work Management; and Adam Wolf, Head of Engineering, Software Infrastructure, encouraged and supported us in pursuing a more all-encompassing, practical-engineering-oriented treatment of modern C++, including C++14, in book form.

Finally, this book would not have been possible without the generous patronage of our Chief Technology Officer, Shawn Edwards. Without his support, and especially his sponsorship, the vast technical resources needed for this book to come to fruition could never have been brought to bear. Shawn, with his illustrious career as a developer, team lead, and technical manager, and now, as a senior executive, has graciously provided a foreword to this book.

### **Acknowledgments for the Second Printing**

This second printing contains corrections and clarifications we’ve made thanks to the careful reading and error reporting of Julien Jorge and Ben Saks. We’ve also set numerous additional glossary terms in the proper font due to a thorough and painstaking review by none other than Andrei’s 13-year old son, Andrew Alexandrescu.
